Question # 8

An organization needs to structure hundreds of developers into scrum teams. You as a scrum master will

Choose the best option

- Work with organization management and prepare the best structure for each scrum team based on the seniority and skills of developers
- Identify required number of scrum masters and require them to choose their scrum teams
- Facilitate awareness of developers about the goals and objectives of product development, coach them about scrum and let them work among themselves to form scrum teams

Question # 4

It has been decided that the architecture for a project will have three layers i.e., a front end UI, a middleware which will host the business logic and a database component for the storage. Which of the following team structures would you recommend for a better business outcomes?

Choose the best option

- Three teams, one for each of the layers with clear protocols and interfaces between them to improve business oriented collaboration.
- Six teams, one development and one testing for each of the layers. A central integration team to continuously integrate the work.
- Feature based teams, where each team is staffed with all the skills needed to develop the features.
- As long as the architecture is robust, team structuring does not matter.

Question # 50

Revisit

A scrum team develops software during the sprints. Only when the Product Owner decides to go for release, the team takes up user documentation during the Sprint. Which of the statements is correct?

Choose the best option

- It is correct. Creating documents early will require constant effort to keep them updated.
- It is correct. Scrum favors less documentation and the team can defer it to the last minute.
- It is incorrect. Anything that is required for the product increment to be production ready must be part of the "Definition of Done" for the Sprint.
- All of the above.

Question # 46

A few days after the sprint planning, the Product Owner finds that it makes sense to develop another new functionality. Which two of the following statements are correct?

Choose the best option(s)

- The Developers will add the new item to the Sprint Backlog.
- The Product Owner can add the new item in the product backlog. In the next sprint planning, the Product Owner can bring it up for the Developers selection.
- If the Developers agree, the Product Owner can swap an existing functionality in the current Sprint, for the new functionality.
- The Developers should obtain the Scrum Master's approval to add this to the Sprint Backlog.

Question # 45

An organization is on its path to adopt scrum as its approach to software development. It decides to convert all project managers into scrum masters. Select the statement that holds good.

Choose the best option

- It is a good strategy. The project managers already know how to run projects. They just need training on scrum.
- It will create resentment to project managers, because they will have a small team to manage.
- The organization needs to rethink on this strategy. Identifying persons who are inclined or experienced in coaching and facilitation as their leadership style is a better strategy.

Question # 41

Revisit

TCS is awarded an engagement which involves managing the end-to-end IT Services (Application Development, Application Support, Infrastructure Engineering and Infrastructure Operations). There are no other vendors delivering services to the customer. The customer is facing an ISO audit for operational process. Who needs to ensure that relevant artefacts are available for the audit ?

Choose the best option

- As customer is getting audited, it needs to be the customer who has to face the audit.
- As TCS is the only service provider, TCS needs to face the audit.
- TCS should not be facing audit as this is not exclusively stated activity in the contract.
- Customer should face the audit and TCS teams will be augmenting customer with relevant artefacts and procedure documents.

Question # 40

Revisit

What happens if the offshore team members are not able to participate in the iteration demo due to time zone/infrastructure issues?

Choose the best option

- No issues. Onsite members can have the iteration demo with the Product Owner / Stakeholders. It is a single team anyway.
- Offshore members will miss the opportunity to interact with the Product Owner / Stakeholders and get the direct feedback about the increment they created.
- No major issue. Since offshore Lead and onsite members participate in the demo with the Product Owner / Stakeholders, they can cascade the feedback back to the offshore members.
- It is a loss as the offshore members will not be able to contribute to ideas related to way of working.
